

EcoStudio Workshop Series:

How to pitch your research to reporters

Led by Emily Foxhall

In person, October 21st at 6:30PM. [Register here.](#)

Have you ever wondered how to reach out to a reporter about your work or how to interact with a journalist once you do? In this seminar, Texas Tribune Climate Reporter Emily Foxhall will demystify this process of working with the media, especially when it comes to stories related to the environment and energy. Academic experts can be a great benefit to helping both science and general assignment reporters understand complicated issues and the latest research. She will discuss how professors and students can share their knowledge for stories or try to get their work featured. Participants will have a chance to develop their own pitches around their areas of study or expertise.

Emily Foxhall is The Texas Tribune's climate reporter. She joined the Tribune as an energy reporter in December 2022, and she completed a year-long Knight Science Journalism Fellowship at the Massachusetts Institute of Technology in May 2025.
